The sequence contained an ollgo-dT track that was present in the oligonucle-getide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the CDNA between the NotI site and the ollgo-dT track served to identify it as a clone from the normalized testis library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this CDNA sequence: 1-35, >POLY_A#Simple_repeat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Contact: Scares, MB

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to human potassium channel beta-subunit CC (K+betaM2) proteins and polynucleotides encoding such proteins. The CK+betaM2 sequences are useful for diagnosing, treating and/or preventing CC reproductive disorders, neural disorders, disorders related to aberrant CC potassium regulation or hyper potassium channel activity, metabolic CC disorders (e.g. premature puberty), endocrine disorders (e.g. aberrant CC growth hormone synthesis and/or secretion), memory disorder, disorders (c.g. of the testis (e.g. spermature puberty), endocrine disorders (e.g. aberrant CC growth hormone related to aberrant disease or disorders (e.g. aberrant phyroid hormone release, renal disease or disorders (e.g. caraining deficiencies), neurodegenerative diseases or disorders (e.g. disease), proliferative diseased to me or excitability (e.g. asthma). CC diseases) are smooth muscle tone or excitability (e.g. asthma). CC They may be used to modulate haemostatic or thrombolytic activity, to compare the diseases, wounds, autoimmune diseases, disorders or conditions (e.g. diseases, wounds, autoimmune diseases or disorders, blood platelet of graft-versus-host disease, and hyperproliferative diseases. K+betaM2 cc M, beta and a gene therapy. The present sequence is human cc K+betaM2 cc M, and a gene therapy. The present sequence is human cc
                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

These were isolated from expressed sequences tags (ESTg). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. reakinson's disease. The present sequence is a coding sequence of the

The present invention relates to human potassium channel beta-subunit (K+betaM2) proteins and polymucleotides encoding such proteins. The CC (K+betaM2) exquences are useful for diagnosing, treating and/or preventing the conductive disorders, neural disorders, disorders related to aberrant potassium regulation or hyper potassium channel activity, metabolic confistorers (e.g. premature puberty), endocrine disorders (e.g. aberrant cycleotrope synthesis and/or secretion), memory disorder disorders of the testis (e.g. spermatogenesis), neuroendocrine condition related co aberrant thyroid hormone release, renal disease or disorders (e.g. caphritis), disorders related to aberrant higher brain function (e.g. caphritis), disorders related to aberrant higher brain function (e.g. caphritis), disorders related to aberrant diseases (e.g. Alzheimer's conditions of the condition of the condit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New potassium channel beta-subunit, K+betaM2, proteins and nucleic acids, useful for diagnosing, treating and/or preventing e.g. reproductive, neural, metabolic, endocrine, memory, neurodegenerative disorders or diseases

K-betaNZ: sequences are also used in gene therapy. The present sequence is human BAC ACO08652 exon used to isolate K-betaMZ cDNA. This sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 769 BP; 209 A; 180 C; 184 G; 196 T; 0 other;

Sequences ABB10991-ABB12330 represent 1350 novel human polypeptides, and CC sequences ABA08225-ABA09574 represent nucleic acids encoding them. The CC invention also relates to vectors and recombinant host cells comprising a cC nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of iderecting the nucleotides or polypeptides in a sample, and methods of ideriting the nucleotides or polypeptides of the invention have homology to known proteins, thereby CC giving an insight into their probable biological activities, and hence CC polypeptides of the invention have homology to known proteins, thereby CC giving an insight into their probable biological activities, and hence CC polypeptides activities, including cyrokine, cell proliferation or cell conditions activities, including cyrokine, cell proliferation or cell conditions regulatory activity, activity, tissue growth activity; consolved in oncogenesis, cancer cell proliferation or cell conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoletic disorders (e.g., myeloid or lymphoid cell cancers, haematopoletic disorders (e.g., myeloid or lymphoid cell cancers, haematopoletic disorders (e.g., myeloid or lymphoid cell conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoletic disorders (e.g., myeloid or lymphoid cell cancers) conditions, company be used to promote wound conditions includes with growth factor activity may be used to promote wound to immune disorders.

CC promote cell growth. For example, such polypeptides may be used to promote wound to manipulate stem cells in culture to give rise to neuroepith

The polypeptides and nucleotides may also be used in: the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a cDNA encoding a novel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 906 BP; 220 A; 225 C; 216 G; 245 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel nucleic acids encoding novel human foetal C antigens. The nucleic acids and proteins are used to prevent, treat (e.g. by gene therapy) or amaliorate a medical condition in e.g. humans, mice, CC rabbits, goats, horses, cats, dogs, chickens or sheep. They C are also used in diagnosing a pathological condition or susceptibility CC to a pathological condition. The antibodies to the antigens can also C be used in alleviating symptoms associated with the disorders and in CC diagnostic immunoassays e.g. radioimmunoassays or enzyme linked imclude autoimmune diseases. Disorders which are diagnosed or treated CC include autoimmune diseases e.g. reunatoid arthitis, hyperproliferative disorders e.g. neoplasms of the breast or liver, CC exidovascular disorders e.g. recoplasms of the breast or liver, CC e.g. cerebral ischaemia, anglogenesis, nervous system disorders e.g. Ce.g. cerebral ischaemia, anglogenesis, nervous system disorders e.g. CC e.g. cerebral ischaemia, anglogenesis, nervous system disorders e.g. CC and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to CC prevent skin aging due to sumburn, to maintain organs before CC transplantation, for supporting cell culture of primary tissues, to CC minerals, cofactors and other nutritional components. Numerous sustences as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, CC minerals, cofactors and disorders treated by the nucleic acids and creaments expenses.

The invention relates to human transporters and ion channels (TRICH) polypeptides and nucleic acid molecules encoding such polypeptides. TRICH proteins are useful for preparing compositions for diagnosing or compositions for discosing or overexpression of functional TRICH e.g. atherosclerosis or cancer. The invention is useful in gene therapy. The present sequence is human TRICH CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        mat_peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sig_peptide
                                                                                                                      New human functional transporters and ion channels (TRICH) polypeptides, useful for preparing a composition for diagnosing treating a disease associated with decreased expression or overexpression of TRICH e.g. cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cc contiguous residues of (a); (d) sequences that hybridize to (a), under cc domestic stringent conditions; (e) sequences having at least 75% or 90% cidentity to (a); or (f) degenerate variance of (a). Polypeptides cc (ABP68596-ABP68637) encoded by (I) and oilgonuclectide can be used to detect cancer in a patient and compositions comprising polypeptides, polynuclectides, antibodies, fusion proteins, T cell populations and can tigen presenting cells expressing the polypeptide are useful in creating pancreatic cancer and stimulating an immune response. The polynuclectides can be used as probes or primers for nucleic acid polynuclectides can be used as probes or primers for nucleic acid polynuclectides can be used as probes or primers for nucleic acid polynuclectides can be used as probes or primers for nucleic acid inhibiting expression, in the design and preparation of ribozyme molecules for inhibiting expression of the tumour polypeptides and proteins in the uneour cells, in vaccines and for gene therapy.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO can they published pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches 214;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Juery Match

CC any of a group of over 4000 nucleotide (1) comprising: (a) (2) cany of a group of over 4000 nucleotide sequences (ABV99145); (CC (a) complements of (a); (c) sequences consisting of at least 20 contiguous residues of (a); (d) sequences that hybridize to (a), under CC contiguous residues of (a); (d) sequences that hybridize to (a), under CC (a); (d); or (f) degenerate variants of (a). Polypeptides (c) detect cancer in a patient and compositions comprising polypeptides, CC polynucleotides, antibodies, fusion proteins, T cell populations and CC antigen presenting cells expressing the polypeptide are useful in CC treating pancreatic cancer and stimulating an immune response. The polynucleotides can be used as probes or primers for nucleic acid chybridisation, in the design and preparation of ribozyme molecules for CC inhibiting expression of the tumour polypeptides and proteins in the CC uncer: The sequence data for this patent did not form part of the printed concer: The sequence data for this patent did not form part of the printed concer: The sequence data for this patent did not format directly from WIPO CC at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and pancreatic tumor polypeptides, useful for diagnosing, preventing and/or treating cancer, particularly pancreatic cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2002-627435/67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; SEQ ID NO 564; 300pp + Sequence Listing; English

The human potassium beta subunit polynucleotide or polypoptide is useful for diagnosing, preventing, treating or ameliorating a pathological condition such as gastrointestinal, reproductive, neural, sleep, cardiovascular or pulmonary disorders, a disorder related to hyperpotassium channel activity, an immune disorder related to aberrant NF-kB activity, pineal gland associated disorders, migraine headaches, disorders associated with aberrant melatonin synthesis and/or release or with low DNA repair capacities or low free-radical buffering capacity, delayed sleep phase syndrome, aberrations in circadian cycle, mammary cancer tumourigenesis, age related disorders associated with decreased melatonin secretion, or cancer. This polynucleotide sequence represents the cDNA encoding the potassium channel beta subunit (K-betaM6) protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotide encoding human potassium channel beta subunit polypeptide, useful for diagnosing, preventing, treating or ameliorating e.g. cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC (a) screening modulators of precursor stem cell differentiation into CC osteoblasts, or bone tissue deposition; CC (b) diagnosing abnormal deposition of bone tissue, abnormal rate of CC (c) treating abnormal deposition of bone tissue, abnormal rate of CC osteoblast formation or osteoporosis; or (CC osteoblast formation or osteoporosis; or conditions cited in (b), or CC osteoporosis or male osteoporosis, osteoporosis, glucocorticoid CC osteoporosis or male osteoporosis, osteoporia, osteodystrophy, CC drug-induced abnormalities in bone formation or bone loss, conditions CC osteoporosis, skeletal disease linked to breast cancer, mastocytosis, CC ranconi syndrome or fibrous dysplasia. The present sequence is that of an CC osteoporosis, skeletal disease linked to breast cancer, mastocytosis, CC ranconi syndrome or fibrous dysplasia. The present sequence is that of an CC osteophast differentiation associated cDNA marker of the invention. CC Note: The sequence data for this patent did not form part of the printed cspecification, but was obtained in electronic format directly from WIPO CC at fip. wipo.int/pub/published_pct_sequences.

This invention describes a novel method for determining the degree of comethylation of a particular cytosine in a motif 5-Cpg-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridized to two classes, each with at least one complete the contains the target C is amplified to form a labeled amplicon. The amplicon is hybridized to two classes, each with at least one can the degree of hybridization to both classes is determined from the can degree of hybridisation to both classes is determined from the can defect of the two classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory contains particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (il) for differentiation of cell or tissue control of the central nervous cardiovascular can be calculated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-SEP-2000; 2000DE-1043826.

ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 854 BP; 131 A; 98 C; 289 G; 336 T; 0. other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel method for determining the degree of commethylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert C cytosine (C) but not methylated C, to ureal, then part of the genomic CDNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one contains the contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one contains the degree of hybridiseation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide types and for investigating cell differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. Ab031410-Ab054121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in cut the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

This invention describes a novel method for determining the degree of commethylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide nucleic acid (PNA) oligomers and the degree of hybridisea to two classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. Amaging the degree of cytosine methylation described in cethod for determining the degree of cytosine methylation described in cytosine methylation described in the described in very contract of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 171;

                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one CC member, of oligonucleotides and/or peptide nucleic acid (PNA) oligomers and the degree of hybridisea to two classes is determined from the Classes of oligomers, the degree of methylation is calculated. The method CC classes of oligomers, the degree of methylation is calculated. The method CC is used; (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously.

ABO13410-AB054121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in CC method for determining the degree of cytosine methylation described in CC the disclosure of the invention.

                            This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligoners and the degree of hybridiseat to two classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to the two classes of classes of oligoners, the degree of methylation is calculated. The method CC classes of oligoners, the degree of methylation is calculated. The method CC is used; (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders CC of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide complymorphisms (SNP's); and (ii) for differentiation of cell or tissue complymorphisms (SNP's); and (iii) for differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABGJ3110-ABGJ3112 represent genomic DNA sequences used to illustrate the CC methylation of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; cytosine methylation; 5'-CpG-3'; uracil; cytosine; diagnosis; drug; side effect; cancer; central nervous system; cardiovascular; gastrointestinal; respiratory system; single nucleotide polymorphism; SNP; cell differentiation; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Oligonucleotide for detecting cytosine methylation SEQ ID NO 27247.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    12-JUL-2002
